Give AI a Job

Writing a Speech with Purpose · Saturday, Nov 7 · about 6 minutes

1	0:00	Who gave AI a job?	center
2	1:20	Job one: hard forms	your right
3	2:45	Job two: posting everywhere	center
4	4:10	Job three: meeting people	your left
5	5:30	Three jobs, one rule	center

● 5:00 ● 6:00 ● 7:00 Yellow before part 5? Jump to "So, three jobs."

My three rules: AI fills, I submit. · You are still the manager. · Making friends is still my job.

(Blue) = what to do.
Bold = say it slowly.
Orange bar = learn by heart.

1 · Who gave AI a job?

0:00 · Center

(Stand in the center. Raise your own hand as you ask. Wait two seconds after each question.)

> **BY HEART**
>
> Please raise your hand if you used AI this week. *(pause)*
>
> Keep it up if you asked AI a question. *(pause)*
>
> Now keep it up only if AI did a job for you. It filled in a form, posted something for you, or clicked through a website for you. *(pause)*

(Most hands go down? Smile and go on. Many hands still up? Use the backup below.)

That is the difference I want to talk about today.

Most people use AI like a very smart search box. You ask, it answers. But today, AI apps like ChatGPT and Claude can do more. They can open a website, click, type, and fill things in. **AI can do the work, not just talk about it.**

BACKUP: MANY HANDS STILL UP?

Say this instead of the two paragraphs above:

Great! Then you already know AI can do real work. Today you will get three jobs you may not have tried, and **three rules I learned the hard way.**

Then go on with "I am an AI engineer."

I am an AI engineer. But the three jobs I will show you today need no coding at all. You can try every one of them this week.

2 · Job one: hard forms

1:20 · Your right

(Walk to your right side. Show one finger.)

Job number one: hard forms.

This summer, my girlfriend and I ordered spices from Turkey. Sumac, red pepper, dried mint. *(smile)* Very important things.

Then FedEx sent us an email. Our spices were stuck. They needed a plant quarantine check first. To get them out, we had to apply on a Korean government website. Or pay a broker 30,000 won.

The form was all in Korean. Only one or two pages, but so many boxes to fill in, and so many options to choose from.

So I gave this job to AI. I let it take over my browser, and it filled in the boxes and picked the options. I only helped a little. I logged in myself, and I showed it where to find my customs number. **The rest, it did by itself.** *(pause)*

But I have one rule. **AI fills, I submit.** Before I press the button, I check everything. Because my name is on that form, not the AI's.

3 · Job two: posting everywhere

2:45 · Center

(Walk back to the center. Show two fingers.)

Job number two: posting the same thing in many places.

I run a small tech meetup here in Daejeon. Before every meetup, I post the news on Luma, Facebook and Instagram. After the meetup, I post a recap. Same news, three websites, three different layouts.

Now I give AI the photos and a few lines about what happened. It writes the post in Korean and English. I read it and say OK. Then it opens each website and posts it. It even moved 28 old posts to our new Instagram page.

But here is my favorite part. For a whole week, the captions on our Instagram posts kept disappearing. The AI told me: "Instagram is blocking us." And I believed it. *(pause)* Then I looked closer. **It was not Instagram. It was my AI.** It was pressing the button the wrong way. *(wait for the laugh)*

AI is a fast worker. But you are still the manager. Check its work.

4 · Job three: meeting people

4:10 · Your left

(Walk to your left side. Show three fingers.)

Job number three: getting ready to meet people.

I love meeting people. I love connecting them and helping them. But big events are hard. Last month, I went to a tech event in Seoul. On the event page, I could see the guest list. About a hundred names.

Before, I would just walk in and talk to whoever was standing next to me. This time, I gave the list to AI. It checked 82 LinkedIn profiles. Then it gave me my top six, in order, and why. One of them was the CEO of an AI company who also teaches at KAIST, right here in Daejeon. It even told me who to skip, like two people who actually live in the UK. *(smile)*

So I walked in knowing who to say hello to. *(pause)*

AI can find the right people. But making friends is still my job.

5 · Three jobs, one rule

5:30 · Center, one step forward

(Come back to the center and take one step forward. Count the jobs on your fingers.)

So, three jobs. Hard forms. Posting everywhere. Getting ready to meet people.

Did you notice? The first two jobs are boring. **AI is great at boring.** And that gives me more time for the third one: people. That is why I am here today, in a room full of people, and not in front of a screen.

> **BY HEART**
>
> So next week, when someone asks, "Did AI do a job for you?", I hope your hand stays up. *(pause)*
>
> **Let AI do the clicking. You do the talking.** *(pause)*
>
> Thank you.
